Every worker. Every industry. A strong economy.

Helping states measure non-degree credential attainment

Data on non-degree credentials can help states measure progress in meeting goals for educational attainment, including equitable attainment. This data can also help states determine whether training opportunities really line up with employer demand. The Workforce Data Quality Campaign's newest publication, [Measuring Non-Degree Credential Attainment: A 101 Guide for States](#), provides states with a step-by-step guide on how to measure non-degree credential attainment.

States administrators, providers, and skill advocates can learn how states are collecting data about non-degree credentials during the WDQC webinar, "Measuring Non-Degree Credential Attainment," on June 18th at 2 P.M ET. [Register today!](#)
